

CLOUD OPTIMISATION

Delivered by Silicon, Powered by Cloudyn.

Save money, regain control and make better decisions with
your cloud environment.

Monitor and manage your AWS Cloud for greater efficiency and transparency.

If you're already using AWS to deliver cloud services to your business, you'll understand the business benefits that it can provide. But you'll also know it can be frustrating managing your AWS cloud - it can quickly become a complex landscape, making it difficult to track usage, performance and cost.

Cloud Optimisation from Silicon overcomes these challenges by providing granular visibility, performance and cost optimisation recommendations for your cloud via a simple, customisable management dashboard.

And best of all, it's absolutely free.

What you get:

1. You're provided with a browser based dashboard that can be self configured to deliver snapshots and detail on the information that's important to you.
2. The powerful Optimisation tool provides recommendations for maintaining the most cost efficient deployment, cost and performance-wise.
3. All your AWS billing comes from Silicon in one simple, condensed and easy to understand monthly invoice. You're invoiced in NZ\$ and your invoice is payable on standard credit terms.

Key Benefits:

Optimise

Ensure that your cloud deployment is optimally priced, sized and utilized.

Cut Costs

Understand your cloud spend and eliminate shocking & convoluted monthly bills.

Gain Insights

Visualise your usage and performance trends all in one place.

Compare Clouds

Research your deployment's performance and cost across cloud platforms.

Highlights:

- Optimiser

Cost-Effective Sizing Recommendations

The powerful Optimisation tool constantly seeks for inefficiencies and provides actionable recommendations for maintaining the most cost-effective deployment. This is done through right-sizing of underutilised cloud resources and recommendations for pricing model modifications.

- Customisable Dashboard

Create relevant dashboards in seconds, highlighting only what information is relevant to each user immediately upon login.

• Accurate and Reliable Cost Allocation

The innovative Cost Allocation 360° engine enables IT departments to produce reliable and accurate cost allocation reports at any level in the enterprise hierarchy while accounting for all cloud costs, including those that are naturally unallocatable (support, data transfer, Reserved Instances and more).

• Scheduled Reporting and Alerts

The screenshot shows the 'Actual Cost Over Time' dashboard. A modal window titled 'Save or Schedule this report' is open. The modal has three tabs: 'Save details', 'Scheduling', and 'Threshold'. The 'Scheduling' tab is active. It contains the following options:

- ☒ Enable scheduling
- Send to: Recipient list: Default (Add new)
- Email: Awn@westcon.com
- Schedule:
 - ☒ Daily
 - ☐ Weekly
 - ☐ Monthly
- At: 14:00 Local time (UTC +13)
- Report format:
 - ☒ As email content
 - ☐ As Excel attachment

Impose cloud governance and promote accountability within your organisation by scheduling reports to be sent on a regular basis to a custom distribution list. Control your cloud by settling alerts that are pushed to users as usage and cost approach or breach pre-determined thresholds.

FAQs:

Why is it free?

Simple - it costs us nothing to deploy the tool, so you get the benefit. We are paid a small rebate from the cloud provider which is what makes the business model work. Its a win-win for you, and us as your AWS partner.

Do I have to sign a long-term contract?

No. All plans are billed montly and you can choose to cancel the service at anytime, with 30 days notice.

Does the Optimised work on other cloud platforms as well?

Yes. Our Cloud Optimisation Engine provides the same benefits for Google, Openstack and Azure (Azure Optimisation does have an additional cost of 6% of total billing.) AWS is the most widely used public cloud platform globally.

How much money can my business save?

Other users of this service have saved up to 40% on their total billing. A 25 - 30% saving is typical.
